

What was achieved last week?

Finished the UI wireframes and basic backend structure

Team roles were also assigned

What is the focus for today?

Worked on the dashboard, login/logout system, and API testing

What blockers exist?

There was no database yet

What went well?

The frontend and backend setup was strong and organized

What didn't go well?

Authentication was still not finished and some features could not be tested

What should we start doing?

Improve the login system

What should we continue doing?

Continue clear communication between teams
